

EXECUTIVE BRIEF

Terra Vita Hub - Executive Brief for Committees

Institutional governance and assurance infrastructure for committee orientation before protected diligence.

Reliance boundary: Terra Vita Hub structures evidence, routing, assurance and export posture. It does not approve, finance, regulate, rate, certify or replace authorised institutional judgement.

Purpose

Terra Vita Hub provides institutional-grade governance and assurance infrastructure for programmes operating across agriculture, climate, mining, coastal and sovereign decision environments. It separates public narrative from reliance-grade evidence and makes evidence lineage, routing, review conditions and export posture legible before protected diligence.

Core Institutional Posture

- Governance infrastructure, not a product dashboard.
- Non-substitution stance: no automated signal can create or alter a binding approval, disbursement or policy decision.
- Reliance boundary: public materials explain posture; protected environments hold evidence and reviewer actions.
- Audit reconstruction: decisions must be attributable, sequenced and export-ready.

Governance Spine

The governance spine is the reference architecture that joins identity, evidence, routing, assurance, MRV attachment, export and audit reconstruction. Each layer creates control points without centralising statutory authority inside the platform.

Committee Use

- Orient senior sponsors before access is granted.
- Provide procurement, legal, MRV and fiduciary reviewers with a shared vocabulary.
- Clarify which questions require protected diligence and which can be answered publicly.
- Support a controlled route from initial review to evidence-bound workspace.

Document control: v347 public visual QA sweep. Generated for Terra Vita Hub search, institutional review routing and artefact integrity verification. No confidential or programme-specific evidence is included.
